Summary

Software Development Engineer with a strong foundation in full-stack web development and a growing specialization in test automation, system validation, and quality engineering. Experienced using Python and JavaScript to validate application behavior, test data pipelines, debug edge cases, and improve system reliability. Skilled at working across the application stack and collaborating with engineering teams to integrate testing into the software development lifecycle. Known for analytical problem-solving, documentation discipline, and a metrics-driven approach to improving software quality.

Technical Skills

Languages & Frameworks: Python, HTML, CSS, JavaScript, React, SQL

Web & Application Development: React, REST APIs, responsive UI development

Testing & Quality: Test automation concepts, validation scripting, debugging failed tests, test maintenance, Selenium (exposure), edge case testing

Tools & Platforms: Git, GitHub, VS Code, Docker, AWS

Dev Practices: CI/CD awareness, version control (Git), documentation, troubleshooting, Agile/Scrum

Certification / Education

North Carolina State University – Certification in Software Development (Bootcamp) - May 2022–January 2023

MuleSoft Developer Level 1 – April 2023

IBM AI Developer – June 2025

Johnson and Wales University - Associates of Science in Culinary Arts – November 2004 Magna Cum Laude

Developer Experience

Independent Web Developer – 2025 - Present

- Developed and validated web application features using React, JavaScript, and Python.
- Wrote Python scripts to automate validation checks, improving confidence in system outputs.
- Investigated edge cases and system inconsistencies through structured debugging and testing.
- Maintained documentation for features, defects, and known issues to support maintainability.
- Collaborated with other developers to ensure feature reliability before release.

AI-Powered Stock Screening & Trading Intelligence System — Independent Project

Python, data analysis, automation

- Built and tested data pipelines and scoring logic using Python
- Developed repeatable validation processes to ensure output consistency across updates
- Debugged system behavior under changing data conditions and improved fault tolerance
- Reduced manual testing effort through automation scripts

Additional Experience

Eurest Dining

2025-2026

Chef Manager

- Lead food & beverage operations across three café locations, overseeing menus, production standards, inventory, labor, and financial performance.
- Manage supplier relationships and purchasing decisions to balance quality, cost, and availability while supporting operational needs.
- Implement standardized menus, recipes, and procedures to ensure consistency and compliance across locations.
- Develop and mentor culinary leaders and frontline teams, driving accountability, engagement, and continuity.

Constellation Culinary Group | 2023–2025

Executive Chef

- Applied quality assurance principles to operational systems, validating new tools and workflows before full rollout.
- Tested system updates and changes in POS and reporting platforms to ensure accuracy and reliability.
- Documented known issues and process changes to support smooth adoption across teams.

Sunrise Senior Living | 2022–2023

Executive Director

- Led testing and validation of operational and reporting tools prior to deployment.
- Investigated system issues through log review and vendor collaboration to restore service and accuracy.

Elmcroft Senior Living | 2019–2022

Dining Services Director/Assistant Executive Director

- Supported rollout of new operational and technical tools across teams.
- Created documentation and training materials to support system adoption.
- Partnered with IT and vendors to resolve system issues and improve uptime.

Brookdale Senior Living | 2017–2019

Dining Services Director

- Improved internal service workflows based on direct user feedback and performance data.
- Supported organizational change initiatives and new process adoption.
- Collaborated with leadership to align operations with business goals.

Watercolour Grill House at Marriott Sandkey | 2015–2017

Restaurant Manager

- Streamlined internal systems and workflows to improve efficiency and service quality.
- Implemented process improvements based on operational data and customer feedback.
- Collaborated with cross-functional teams to deliver consistent service outcomes.
